All options stored in a context menu There is no easy way to select other

types of notes, other than figuring out they are bound to keyboard buttons and no option to suggest this. Breaks are automatically placed, as well as links, with the output result mostly being generated with a great deal of luck. However, there is an integrated context menu which holds all functions. You can start new projects or open existing ones, or load MIDI files for processing. Edit options give you the possibility to perform operations like copy, 6a5afdab4c
