there are also plenty of additional features available, including a virtual dog, a virtual helicopter, a virtual camera and a virtual inventory system. the dog can alert you to 'trends' around your location, the helicopter will airlift you to new areas, the camera is used to take photos to send to hq, and the inventory system allows you to carry and access a variety of items and weapons. it's a nice touch, but one that has been used in previous games - and the concept of an itemised inventory system is probably the most boring thing about playing a conflict game. if you've played a conflict game before, you'll know what to expect - if not, you'll be pleasantly surprised by just how enjoyable the overall package is. pivotal has done a pretty good job making the game feel like a continuation of previous series titles, and this is not least due to the content they've included. the missions are detailed and varied, and offer a great mix of action, stealth, and stealth action. overall, conflict global terror is a great game, and one that you'll be playing for many hours. the guns are authentic and the gameplay is tight and fun, and it's a great addition to the conflict series. of course, if you've got a decent control scheme then you can play it like an action game, and use the spacebar to boost off enemies, then quickly scythe the ground with a machine gun or assault rifle. we liked the ability to lock-on to other players, but this can be pretty tricky, especially on the higher difficulties. the game also forces you to control every weapon and character, and in a way this feels more like a third-person shooter than a first-person shooter. and because you're not free to simply zoom around on the battlefield, there are times when you simply have to get up close and personal with an enemy, which is the case with many of the more grisly encounters.
